# Activity 2 - Other Intelligent Systems Examples

## What to Do

Research atleast 2 (two) companies/websites (you think) are using `recommender systems`.

Discuss its:

1. input
2. output

## When to Do It

Before next week class.

## Advice

- Recommender systems are examples of intelligent systems where it will try to suggest relevant information to the users.
- Follow the examples in week 2 lecture/modules.
- Don't use `Lazada`, `Facebook` and `YouTube`.
- Think of similar websites like social media sites, e-commerce sites, and video sharing sites.

## Example:

1. Company/website: `Lazada`

   - `input`: a user clicked or liked an item.
   - `output`: recommend similar item at the homepage.

2. Company/website: `YouTube`

   - `input`: a user watched or liked an video.
   - `output`: recommend similar videos at the right side video lists and/or homepage.
